

Unify Wi-Fi — Website Content Blueprint

Domain: `unify.thewify.com`

Product: Cloud RADIUS & ISP Management Platform for MikroTik Operators, WISPs & LCOs

> This document maps out every section of the Unify Wi-Fi website — what it contains, why it's there, and what's new that competitors don't offer. The page structure follows the same approach used in `thewify.com` and `guestwifi.thewify.com`.

Navigation Bar

****What's on it:****

- Logo: Unify Wi-Fi (by TheWiFy)
- Menu links: `Solutions` · `Features` · `Hardware` · `Pricing` · `Blog` · `Contact`
- CTAs: `Sign In` (for existing subscribers) · `Book a Demo` (primary action)
- Floating buttons (bottom right):  Call Us ·  WhatsApp

****Why:****

The same nav pattern used on `thewify.com` and `guestwifi.thewify.com` — keeps everything consistent across the TheWiFy product family. WhatsApp button is critical because most Indian ISP operators prefer WhatsApp over email for initial contact.

Section 1: Hero

****What's on it:****

- Badge: `Cloud RADIUS Platform · Built for ISPs, WISPs & MikroTik Operators`
- Headline: **"Your ISP. Unified. In the Cloud."**
- Sub-headline: **"Connect MikroTik in 10 minutes. Automate PPPoE & Hotspot billing. Manage every subscriber from one dashboard — no servers required."**
- Two CTAs: `Book a Demo` · `See How It Works ↓`

- Trust badges (below headline): `99.99% RADIUS Uptime` · `MikroTik Certified` · `200+ ISPs Active`
- Live Dashboard Preview: An embedded screenshot of the Unify Wi-Fi admin panel showing active subscribers, bandwidth usage, and billing status — same treatment as the live dashboard widget on `thewify.com`

****Why:****

The hero is the most important section. It must answer in 5 seconds: **"What is this? Is it for me? Do I trust it?"** — The live dashboard preview gives ISP operators an instant preview of what they're getting without clicking anything.

****What's new vs competitors:****

Splynx and Sonar both have static screenshots. Our hero shows a **live-feeling interactive dashboard widget** (same as `thewify.com` does with `2,492 Active Sessions`). No ISP competitor does this.

Section 2: Hardware Compatibility Ribbon

****What's on it:****

- Heading: `Works instantly with the hardware you already operate`
- Logo strip of supported router brands: MikroTik · Cambium · Ubiquiti · Ruijie · Cisco · TP-Link
- Under each logo: Setup time badge — e.g., `MikroTik  10 min`

****Why:****

ISP operators always ask **"Does it work with my existing hardware?"** first. Addressing this immediately after the hero removes the #1 objection without them even asking. Same approach used on `guestwifi.thewify.com` where the hardware banner (MikroTik, Cisco Meraki, Aruba, Ubiquiti, Ruckus) appears right below the hero.

****What's new vs competitors:****

Splynx lists hardware deep inside their docs. We put it in the hero zone, with a setup time badge per hardware brand — something no competitor does.

Section 3: The 4 Pillars

****What's on it:****

- Heading: **"Four pillars. One cloud platform."** (same structure as `thewify.com`)
- Pillar 1 — ****Cloud RADIUS & AAA****: Authenticate every PPPoE and Hotspot session through geo-redundant cloud RADIUS. No on-premise RADIUS server needed.
- Pillar 2 — ****Automated ISP Billing****: Auto-generate invoices, send WhatsApp renewal reminders, accept UPI, Razorpay & Stripe — all without manual intervention.
- Pillar 3 — ****Bandwidth & FUP Engine****: Set per-subscriber speed limits, data caps, and Fair Usage Policy throttling directly from the dashboard.
- Pillar 4 — ****White-Label Reseller Portal****: Give your LCO partners their own branded dashboard, subscriber management, and billing under their own domain.

****Why:****

This is TheWiFy's proven section format — group everything under 4 clear pillars so the visitor immediately understands the full scope without being overwhelmed. Mirrors the same "Four pillars. One cloud platform." heading from `thewify.com`.

****What's new vs competitors:****

Splynx lists 6+ modules (billing, networking, CRM, ticketing, field services, inventory). That's complex and hard to digest quickly. We keep it to 4 focused pillars that speak directly to what an ISP actually cares about — ****auth, billing, bandwidth, and reselling****.

Section 4: Trust Stats Bar

****What's on it:****

- `200+ Active ISPs & WISPs` · `50,000+ Subscribers Managed` · `99.99% Cloud RADIUS Uptime` · `10-Min MikroTik Setup`

****Why:****

Same trust-stat bar used on `thewify.com` ("200+ Active MSPs | 1,800+ Live Venues | 8.4M+ Guest Sessions"). Social proof numbers make the platform feel established and trusted. ISPs are risk-averse — numbers reduce hesitation.

Section 5: How Unify Wi-Fi Works (Step Pipeline)

****What's on it:****

- Heading: **"From MikroTik router to cloud-managed subscriber — in under 10 minutes."**

- 5-Step visual pipeline:

1. ****Connect Your Router**** — Point MikroTik RADIUS settings to Unify cloud endpoint. One-time 3-field setup.
2. ****Subscribers Connect**** — PPPoE or Hotspot login authenticated through cloud RADIUS in real-time.
3. ****Plans & Billing Assigned**** — Each subscriber auto-mapped to their plan, speed tier, and expiry date.
4. ****Automated Renewals**** — WhatsApp reminders sent 3 days before expiry. UPI pay link included.
5. ****You Monitor Everything**** — Single dashboard shows live sessions, bandwidth per subscriber, payment status, and alerts.

****Why:****

ISP operators are technical people — they want to know exactly how it works before they trust a platform. `thewify.com` does this with their 6-stage "From SSID to lead" pipeline. We do the same for ISP subscribers. Makes the product tangible, not abstract.

****What's new vs competitors:****

None of the 4 competitors (Splynx, Sonar, Powercode, Azotel) show a simple step-by-step "how it works" flow on their homepage. They all go straight into feature grids, which are overwhelming.

Section 6: Feature Modules Grid

****What's on it:****

- Heading: **"Everything your ISP needs. Nothing it doesn't."**
- 8 feature module cards (with icon + title + 1-line description):
 1. Cloud RADIUS Server
 2. PPPoE & Hotspot Authentication
 3. Subscriber Management Dashboard
 4. Automated Billing & Invoicing
 5. WhatsApp & UPI Payment Reminders
 6. FUP & Bandwidth Throttling
 7. White-Label Reseller Portal
 8. Hardware Integrations & API
- CTA: **`View all features →`**

****Why:****

Same 8-module grid format used on ``thewify.com``. Gives a comprehensive overview in a scannable format without requiring the visitor to click into separate pages.

Section 7: ISP Type Solutions ("The problem we solve, per ISP type")

****What's on it:****

- Heading: **"Built for every type of internet operator"**
- Cards for each ISP segment with specific pain point + Unify Wi-Fi solution:
 - ****WISP (Wireless ISP)**:** **"Manage outdoor CPE subscribers, enforce FUP, and auto-bill monthly — no office visits required."**
 - ****LCO (Local Cable Operator)**:** **"Give your LCO partners a branded portal to manage their own subscribers under your RADIUS infrastructure."**
 - ****Fiber ISP**:** **"Handle PPPoE authentication, static IP allocation, and automated invoice generation across thousands of subscribers."**
 - ****Hotspot Operator**:** **"Sell prepaid vouchers, manage session limits, and monitor bandwidth in real time."**

- **Enterprise Network Manager**: "Centrally manage multi-site RADIUS authentication and bandwidth policies from one cloud dashboard."

Why:

`thewify.com` has the same industry-segment section ("The pain we solve, per industry" for Cafés, Hotels, Restaurants, etc.). For Unify Wi-Fi, the ISP types are the "industries." This section ensures every type of ISP visitor immediately sees themselves reflected in the platform.

What's new vs competitors:

Splynx and Sonar address ISPs generically. We speak to **5 specific ISP segments** with their exact operational pain points in plain language.

Section 8: Subscriber Revenue Calculator (Interactive)

What's on it:

- Heading: "See what Unify Wi-Fi can save you."
- Interactive slider: "How many subscribers do you manage?" (100 → 20,000)
- Real-time output calculation showing:
 - Monthly hours saved on manual billing
 - Estimated reduction in subscriber churn (auto-reminders)
 - Cost saved vs. running an on-premise RADIUS server
- Lead capture: "Get my detailed savings report" → Name + Email + Subscriber count → Sends to `charan@thewify.com`

Why:

`guestwifi.thewify.com` has an interactive ROI calculator (daily visitors → leads, reviews, WhatsApp contacts). For ISPs, the ROI is about **cost savings and time saved on billing operations**. This is the single most powerful lead generation tool on the page — it forces the visitor to engage and quantify the value themselves.

What's new vs competitors:

None of the 4 ISP competitors have an interactive calculator on their homepage. This is a direct advantage inspired by the proven approach on `guestwifi.thewify.com`.

Section 9: The Business Model — You Own. We Run.

****What's on it:****

- Heading: **"Your ISP brand. Our cloud infrastructure."**

- Side-by-side table (same format as `thewify.com` and `guestwifi.thewify.com`):

You Own	We Run
---------	--------

---	---
-----	-----

Your brand & domain	Cloud RADIUS servers
---------------------	----------------------

Your subscriber relationships	Geo-redundant AAA infrastructure
-------------------------------	----------------------------------

Your pricing & plans	Billing engine & payment gateway
----------------------	----------------------------------

Your LCO reseller network	Security, uptime & scaling
---------------------------	----------------------------

****Why:****

ISPs worry about vendor lock-in and losing control of their brand. This section directly addresses that fear. `thewify.com` uses the exact same YOU OWN / WE RUN format for MSPs — we reuse the same concept for ISPs, which keeps the presentation consistent with the TheWiFy product family.

Section 10: Platform Architecture (Technical Credibility)

****What's on it:****

- Heading: **"Enterprise-grade infrastructure. Without the enterprise complexity."**

- 3 technical proof points (same credibility section format from `thewify.com`):

- ****Cloud RADIUS****: ***Geo-redundant AAA cluster. Supports 10,000+ concurrent PPPoE/Hotspot sessions. Sub-15ms auth response.***

- **Multi-Tenant Isolation**: Each ISP and reseller is fully isolated. No data crossover. RBAC and audit logs included.
- **White-Label Stack**: Custom domains, custom billing portal branding, zero Unify Wi-Fi branding on reseller interfaces.

Why:

Network engineers need technical confidence before recommending a platform to their organization. `thewify.com` has a "Platform Architecture Deep Dive" section for the same reason — MSPs need to trust the infrastructure. ISP network admins need the same.

Section 11: Blog & Knowledge Hub (`/blog`)

What's on it:

- Heading: **"The ISP Operator's Knowledge Hub"**
- Filter tags: `MikroTik` · `PPPoE` · `Hotspot` · `Cloud RADIUS` · `Billing` · `WISP` · `India`
- Featured pinned article + article grid (3-column)
- Launch articles (6 at launch):
 1. **MikroTik RouterOS 7 + Unify Cloud RADIUS: Complete Setup in 10 Minutes**
 2. **PPPoE vs Hotspot Authentication: Which Is Right for Your ISP Network?**
 3. **Why On-Premise RADIUS Servers Fail at Scale — And How Cloud Solves It**
 4. **How to Automate WhatsApp Renewal Reminders and Reduce Monthly Churn**
 5. **Setting Up FUP Throttling on MikroTik Using Unify Wi-Fi**
 6. **What Every Small Indian WISP Needs to Automate Before Scaling to 5,000 Subscribers**

Why:

The blog serves two purposes: (1) SEO — it brings in organic traffic from ISP operators searching for setup guides and technical comparisons, and (2) credibility — a useful blog shows we understand the ISP business deeply.

What's new vs competitors:

Splynx has a blog but their articles are generic. Sonar's blog is US-focused (BEAD funding, compliance). Powercode has almost no blog. Azotel has only newsletters. Our blog will be the only one speaking directly to **MikroTik operators and Indian WISP/LCO operators** in practical, actionable language.

Section 12: FAQ (`/contact` and embedded on homepage)

What's on it:

- Heading: "Questions, answered" (same heading as `guestwifi.thewify.com`)
- 5–6 accordion questions:
 - "Do I need to replace my existing hardware?" — No. Unify connects to MikroTik, Cambium, Ubiquiti, and more via standard RADIUS protocol.
 - "How long does it take to set up?" — Under 10 minutes for MikroTik users.
 - "What happens if the cloud goes down?" — Geo-redundant failover. Sub-second switchover. 99.99% uptime SLA.
 - "Can my LCO resellers manage their own subscribers?" — Yes. White-label reseller portals with full isolation.
 - "How does billing work for Indian ISPs?" — Native UPI, Razorpay, Stripe. WhatsApp reminders and payment links auto-generated.
 - "How is Unify Wi-Fi different from setting up my own RADIUS server?" — No servers to maintain, no downtime risk, no Linux expertise required.

Why:

`guestwifi.thewify.com` has a "Questions, answered" FAQ accordion. Same objections need addressing for ISPs — except the specific concerns are around hardware compatibility, uptime, reseller control, and Indian payments.

Section 13: Contact & Demo Booking (`/contact`)

What's on it:

- Heading: **"Show us your network. We'll show you the opportunity."** (adapted from `guestwifi.thewify.com`'s **"Show us your network. We'll show you the opportunity."**)
- **Two options side by side:**

Option A — Book a Live Demo (Interactive Slot Picker)

- Step 1: Pre-qualification (Name, Email, Company/ISP Name, Active Subscribers, Primary Hardware)
- Step 2: Calendar with available date slots
- Step 3: Pick a time slot (10:00 AM / 11:30 AM / 2:00 PM / 4:00 PM IST)
- After booking: Google Meet link auto-sent. Calendar invite issued. WhatsApp confirmation message sent.
- Internal alert to `charan@thewify.com` with subscriber count and hardware details

Option B — Quick Contact Form

- Name, Email, Message → sends to `charan@thewify.com`
- Direct email shown: `charan@thewify.com`
- Phone / WhatsApp number shown

Why:

`guestwifi.thewify.com` has a detailed demo booking form ("Show us your network. We'll show you the opportunity."). We follow the same structure but add a **real-time interactive slot picker** — which none of the 4 ISP competitors offer. Instead of "fill a form and wait 2 days," ISP operators can pick an exact time and instantly get a calendar invite. This is our biggest USP on the contact page.

What's new vs competitors:

- Splynx: Basic form, wait for callback.
- Sonar: Static form, "Talk to an ISP specialist."
- Powercode: Request a demo form.
- Azotel: "Book Demo" button → external tool.
- **Unify Wi-Fi: Inline real-time slot picker with instant Google Meet link + WhatsApp confirmation.**

Section 14: Pricing (`/pricing`)

****What's on it:****

- Heading: **"Transparent pricing that scales with your subscriber base"**
- 3 plan tiers:
 - ****Starter**** — Up to 500 subscribers — ₹X/month — `Start Free Trial`
 - ****Growth**** — 500–5,000 subscribers — ₹Y/month — `Get Started`
 - ****Scale**** — 5,000+ subscribers — Custom pricing — `Talk to Us`
- Free 30-day trial badge. No credit card required.
- Short FAQ below pricing: "Can I switch plans?", "What's included in the free trial?"

****Why:****

None of the 4 competitors show transparent pricing (they all say "contact sales"). By being the only ISP platform that shows pricing openly, we build immediate trust with smaller ISPs who are evaluating platforms independently. Same transparent pricing approach used on `thewify.com` (Venue Starter, Venue Growth, MSP Starter, MSP Scale tiers).

Footer

****What's on it:****

- Same footer format as `thewify.com` and `guestwifi.thewify.com`
- Links: Solutions · Features · Pricing · Blog · Contact · Privacy Policy · Terms of Service
- Contact: `charan@thewify.com` · WhatsApp number · Hyderabad, India address
- Brand note: **"Unify Wi-Fi is a product of TheWiFy Technologies Private Limited"**
- Cross-link: **"Looking for Guest WiFi? Visit `guestwifi.thewify.com`"**

Summary: What's New That No Competitor Does

| Section | What We're Doing New |

|---|---|

| Hero | Live interactive dashboard widget (not a static screenshot) |

| Hardware Banner | Setup time badge per hardware brand (`MikroTik  10 min`) |

| How It Works | Simple 5-step pipeline — no competitor shows this on their homepage |

| ISP Type Cards | 5 specific ISP segments with exact pain points — competitors speak generically |

| Revenue Calculator | Interactive slider calculating savings — no competitor has this |

| Blog | India-first, MikroTik-specific technical articles — a gap no competitor fills |

| Contact | Inline real-time slot picker with instant calendar invite + WhatsApp confirmation |

| Pricing | Transparent per-subscriber tiers shown openly — competitors all say "contact sales" |
